

Email for Understanding Human-Human Collaboration

Dear students,

Would you like to take part in a challenging study involving pair programming and test-driven development? You will pair with another student and utilize test-driven development to work on a Java simple programming task. There is no need for prior experience in these techniques.

You are eligible to take part in the study 1) if you have have basic Java programming experience, preferably in object oriented programming and 2) if you are at least 18 years of age. The study is being conducted as part of research. We will be using your skills to help us understand human-human interaction and collaboration when pair programming using test-driven development techniques. The study will take approximately 1.5 hour to complete. [The study will be conducted in 2170 Rayzor Hall](#). The results of the study may be published in scholarly articles, but your participation will be kept confidential and the results will be aggregated so that no personal information can be identified. Upon completion of the study, participants will receive a \$20 gift card as compensation for their time.

If this sounds interesting to you, we would like to set up a [90 minutes](#) appointment in the next 2 weeks, which we can arrange according to your schedule. Please respond within 1 week to sandeep-kuttal@utulsa.edu if you are interested in participating in this study.

Sincerely,

Sandeep Kuttal
